1. Welcome

PoultrySuite Africa is a farm management platform built for African poultry, hatchery, and feed mill operations. It works on tablets and computers, keeps working when your internet connection drops, and syncs your data securely to the cloud the moment you're back online. The platform is reachable at <http://poultrysuite.agorox.africa>.

This guide walks you through creating an account, setting up your devices, choosing a plan, and using each of the three modules in detail: PoultryOS, HatcheryOS, and FeedMilIOS.

1.1 Quick Start Checklist

1. Create your account and sign in.
2. Start your 7-day free demo to explore all three modules.
3. Register this device (automatic for the farm owner).
4. Set a device PIN so staff can sign in quickly.
5. Choose your plan and activate a paid license before the demo ends.
6. Set up your houses, egg intake, or raw materials, depending on which module you use.

2. Getting Started

2.1 Creating Your Account

1. Go to <http://poultrysuite.agorox.africa> on your tablet or computer.
2. Tap Sign Up and enter your email address and a password (at least 8 characters).
3. A farm account is created for you automatically, and you become its owner.

2.2 Your 7-Day Free Demo

New accounts can start a 7-day free demo with no payment details required. During the demo, all three modules — PoultryOS, HatcheryOS, and FeedMilIOS — are unlocked, regardless of which plan you eventually choose, so you can explore everything the platform offers before deciding what to buy.

Note: The demo can only be used once per account. When it ends, you'll be asked to choose a plan and activate a paid license before you can continue using the app.

2.3 Setting Up This Device

The first time you sign in on a tablet or computer, that device needs to be registered to your farm — a one-time step per device. If you're the farm owner, tap "Register this as my device" and this happens automatically, with no extra steps. If you're a staff member, ask the farm owner for a pairing code from their Settings, then enter it when prompted. Once registered, this device stays registered — you will not need to repeat this step, even after closing the browser.

Note: Use a normal browser window for your everyday work, not Incognito or Private browsing — private browsing forgets device registration every time you close it, which will make it seem as though setup keeps failing.

2.4 Choosing a Plan

Plans are billed annually and differ mainly in device allowance and which modules are included:

Plan	What's Included
Starter	Up to 2 devices. Core PoultryOS — houses, batches, mortality, feed and vaccination tracking. Offline-capable, cloud-synced.
Professional	Up to 5 devices. Everything in Starter, plus the full HatcheryOS module, advanced analytics, and priority email support.
Enterprise	Up to 15 devices. Everything in Professional, plus the full FeedMilIOS module, multi-branch readiness, and dedicated support.

Payment is handled securely through Paystack — cards, bank transfer, and USSD are all supported. Once payment completes, your license activates automatically within a few seconds, with no further action needed from you.

2.5 Setting a Device PIN

Each device can be protected with a 6-digit PIN, so different staff sharing a tablet don't need to sign in with a full email and password every time — just the PIN. Go to Settings & Backup, then the Devices tab, and create a PIN for each staff member who will use this device. Staff can then unlock the device with their PIN alone, without re-entering account credentials.

2.6 Choosing Your Language

PoultrySuite Africa is available in English and French. The language switch sits in the top bar of the app, showing your current language as a two-letter code (EN or FR). Your choice is remembered on each device independently, so different staff on different tablets can each use their preferred language.

3. PoultryOS

PoultryOS manages your bird flocks from daily records through to sales and financial tracking — the core module for any poultry operation.

Command Center

A live overview of active batches, live bird counts, 7-day mortality rate, total feed usage, and net profit and loss — your farm's vital signs at a glance.

Daily Log

The fastest way to record what happened today — mortality, feed given, and vaccinations administered — designed for quick entry by farm staff at the end of each day.

Houses & Batches

Set up the physical houses or pens on your farm, then create and track batches of birds through their full lifecycle from placement to sale.

To create your first batch:

1. Add a house (a building or pen) if you haven't already.
2. Create a new batch, choosing the house, breed, and initial bird count.

3. The batch now appears throughout the app wherever you log daily activity.

Vaccinations

Schedule upcoming vaccinations and record completed ones per batch, keeping a full vaccination history for every group of birds.

Feed Tracking

Log feed consumption per batch and monitor feed conversion ratio over time, an important indicator of flock efficiency.

Health & Mortality

A quick, low-friction way to log symptoms, mortality counts, and likely causes as they happen — built for speed during a busy farm day.

Veterinary & Medical

Structured clinical records for more serious cases: treatments with dosage, route, and withdrawal period; a drug inventory; prescriptions; a disease library; and a symptom checker to help narrow down a diagnosis.

Quarantine & Biosecurity

Track isolation zones, active health cases under investigation, farm access control, and sanitation logs — your farm's biosecurity record in one place.

Sales & Procurement

Manage customers and sales orders on the income side, and suppliers and purchase orders on the expense side — the complete commercial picture for the flock.

Financials

Revenue and cost tracking per batch, so you always know the real profitability of every group of birds you raise, not just the farm as a whole.

Audit Log

A complete, unchangeable history of every change made in this module — what was changed, by whom, and when.

4. HatcheryOS

HatcheryOS manages the complete hatching cycle, from egg intake through to day-old chick output ready for sale.

Command Center

A live view of active incubation cycles, average fertility and hatchability rates, and total day-old-chick output.

Egg Intake

Record incoming batches of hatching eggs, including breed, source farm, and quantity — optionally linking each batch to a registered breeder flock for full traceability.

Incubation

Track egg batches through the incubation period, from setting through to transfer.

Candling

Record candling results partway through incubation to identify and remove infertile eggs, keeping only viable eggs in the incubator.

Hatch Output

Record final hatch results for each batch — eggs set, chicks hatched, culls, and defects — the key outcome data for the whole cycle.

Breeder Flocks

Register the breeder flocks supplying your hatching eggs. Once egg batches are linked to a flock, this screen automatically calculates that flock's average fertility and hatch rate across every batch traced back to it, letting you compare breeder lines and identify your best-performing flocks over time.

Chick Grading

Log post-hatch sexing (male, female, and unsexed counts) and quality grading (Grade A, Grade B, and Reject) as its own distinct step after hatching — matching how this work actually happens on a real hatchery floor, separate from the hatch record itself.

Vaccination & Processing

Record post-hatch vaccination and any other processing steps applied to day-old chicks before dispatch.

Inventory

Track day-old-chick stock on hand, ready for sale or transfer to a poultry farm.

Sales & Procurement

Manage customers, sales orders, suppliers, and purchase orders for the hatchery.

Financials

Revenue and cost tracking for the hatchery operation as a whole.

5. FeedMilIOS

FeedMilIOS manages feed production end to end, from raw material intake through to distribution, with full quality control and traceability built in throughout.

Command Center

A live view of active production batches, current raw material stock value, and overall QC pass rate.

Formulation & Recipe

Define the feed recipes and formulations your mill produces, the basis for every production batch.

Raw Materials

Track incoming ingredient stock. A By Category / By Silo toggle lets you view stock either by ingredient type, or by physical storage silo with live fill-level tracking for each one.

To record a raw material intake:

1. Open Raw Materials and tap Record Intake.
2. Enter the material, quantity, supplier, and optionally a silo assignment.
3. A lot number is generated automatically for traceability.

Raw Material QC

Test incoming ingredient lots for moisture, protein, and aflatoxin before they enter production — a food-safety gate that is entirely separate from finished-product testing, since it happens at intake rather than after milling.

Production Batch

Create and track feed production batches through the milling process, from raw materials to finished product.

Lot Traceability

Link the specific raw material lots consumed by each production batch, in either direction: trace a finished batch back to every raw material lot that went into it, or find every finished batch affected by a specific raw material lot — essential for a fast, accurate recall if a quality issue is ever found in a raw material after the fact.

Equipment & Maintenance

Register your mill equipment — mixers, pelletizers, and more — and log preventive, corrective, or breakdown maintenance against each one, with downtime and cost tracked automatically for every event.

Quality Control

Test finished feed batches for moisture, pellet durability, and uniformity before they are released to stock.

Certificates

Issue a Certificate of Analysis for any completed batch. The certificate is generated automatically, combining that batch's finished QC result with every raw material lot linked to it — a single document suitable for sharing with customers who require documented quality assurance.

Finished Inventory

Track finished feed stock on hand, ready for distribution to customers or internal farms.

Distribution

Record outgoing feed deliveries to customers or to your own poultry and hatchery operations.

Sales & Procurement

Manage customers, orders, suppliers, and purchase orders for the mill.

Financials

Revenue and cost tracking for the milling operation as a whole.

6. Backing Up Your Data

Your data syncs automatically to a secure cloud database across every device registered to your farm — you do not need to manually back up to avoid losing data day to day. For an offline copy — for example, before a major change, or to keep an external archive — go to Settings & Backup:

1. Tap Download Backup to save a complete JSON file of your farm's data.
2. To restore, tap Import Backup and select a previously saved file.
3. All data is restored instantly — useful when setting up a new device offline, or recovering from an accidental change.

7. Forgot Your Password?

1. On the sign-in screen, tap "Forgot password?"
2. Enter your account email and submit.
3. Check your email for a reset link, valid for one hour.
4. Follow the link to set a new password, then sign in as normal.

Note: If the email doesn't arrive within a few minutes, check your spam or junk folder before requesting another reset.

8. Frequently Asked Questions

Can I use the app without an internet connection?

Yes. PoultrySuite Africa is designed to keep working offline — your entries are saved locally and sync automatically to the cloud the next time you're connected.

Can I switch plans later?

Yes, you can upgrade your plan at any time from the License section of Settings & Backup.

What happens to my data if I don't renew my subscription?

Your data is preserved. You will be asked to choose a plan again and complete payment before regaining access to the app, but nothing you have already recorded is lost.

Can different staff use different languages on the same farm?

Yes — the language setting is remembered per device, not per farm, so each tablet can be set to whichever language its user prefers.

How many devices can I register?

This depends on your plan: up to 2 for Starter, up to 5 for Professional, and up to 15 for Enterprise.

9. Glossary

Term	Meaning
Batch	A group of birds placed together and tracked as a unit through their lifecycle.
House	A physical building or pen that holds a batch of birds.
Fertility rate	The percentage of set eggs found to be fertile at candling.
Hatchability	The percentage of fertile eggs that successfully hatch.
Lot number	A unique identifier assigned to a raw material batch at intake, used for traceability.
Aflatoxin	A toxin produced by mold that can contaminate grains and protein meals; tested for during raw material QC.
Device PIN	A 6-digit code letting staff unlock an already-registered device quickly, without re-entering full account credentials.
Demo	The 7-day free trial period during which all three modules are unlocked, available once per account.

10. Getting Help

Every module has a built-in Help & Docs section covering each feature in more depth than this guide — look for it in the module menu within the app.
